Reasons for Allowance

Claims 1-16 are allowed.

These claims are allowed as a whole, and as such any modification to the claims may jeopardize this indication of allowable subject matter. Further Applicant is advised, that the removal of the subject matter specifically noted below will generate a new rejection, whether filed under 1.312 amendment, RCE, Continuation or Reissue. The Examiner upon review of the prior art, both provided by Swedish Patent Office and that of the US Examiner's search of patent and non-patent literature finds the claim overcome the prior art. Below is representative claim 1 of the present Application marked to show the novel and non-obvious aspects.

1. (original) An error messaging method for a communication system where a wireless client terminal communicates with a server (30) through an intermediate device (20), characterized by the steps of:

receiving, at the intermediate device (20), a *first Hypertext Transfer Protocol (HTTP) status code from the server (30)*, the first status code being an error status code;

transforming, at the intermediate device, the first status code into an error description message comprising an error description text (24) and a second HTTP status code, the second status code indicating success and being associated with compulsory display of the error description text (24) at the client terminal (10); and

transmitting the error description message to the client terminal (10), whereby display of the error description text (24) at the client terminal (10) is enforced by the second status code.
